DETAILED ACTION

Since the office action mailed 3/27/03 did not consider the supplemental preliminary amendment filed 5/23/02, the office action is vacated and the supplemental preliminary amendment has been entered. Restriction is required as set forth below.

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Group I, Figs. 1 and 2;

Group II, Fig. 6.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 3727

The claims are deemed to correspond to the species listed above in the following manner:

Group I, claims 20 and 21

Group II, claims 22 and 23

The following claim(s) are generic: 1-19, 32, 33, and 34.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The independent claims are not patentable as seen in Figs. 1-4 of Pete (DE 3138510). Since the independent generic claims are not patentable, the individual special technical feature of each closure mechanism is required for patentability. The closures have different locking structures, each with their own special technical feature. The first is folding tongues with the apertures in the tongues for receiving the end of the bar. The other is elastic lugs.

A telephone call was made to Neil F. Greenblum on 7/11/03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph C. Merek whose telephone number is (703) 305-0644. The examiner can normally be reached on Monday-Friday.
